## **Data Quality Notes**

## Reporting Period: October 2025

Data Source: Wait Time Information System (WTIS) and direct file submission to CCO via MFT Tumbleweed (MRI and CT Extracts i.e. Booking File, Patient File and Operating Hour File).

## Important Notes:

- 1. The MRI and CT wait times data used for the dashboard was extracted on the 6th business day after month end from the Wait Time Information System (WTIS) and the MRI and CT efficiency data was extracted on the 13th business day after month end from MFT Tumbleweed (MRI and CT Extracts i.e. Booking File, Patient File and Operating Hour File). Please note that the MRI and CT efficiency data are based on extracts submitted via MFT Tumbleweed by the 15th business day of the month. In addition, historical information for the wait time (90th percentile) and report turnaround time (90th percentile) indicators contained in these reports will be updated with the most up-to-date data in the Wait Time Information System.
- 2. The reportability designations and data quality notes pertain to the monthly MRI and CT data extracted from MFT Tumbleweed on the 15th business day of the month following the reporting period.
- 3. MRI and CT data are shown at the LHIN and Provincial level if 90% of the contributing sites have submitted data that is suitable for reporting. Please refer to Methodology worksheet for more details on reportability
- 4. The Demand (OP), Wait List (OP), and Missed Procedure / No Show KPIs are reported with a two month delay in order to be able to report more accurate information. This means that the most recent report will not have information available for these KPIs, but they will be populated for two months earlier.

## Update to DI Efficiency Performance reporting

Note: As per the memorandum sent to Ontario Health and hospitals on March 15, 2020, hospitals were requested to ramp down elective surgeries and other non-emergent clinical activities to preserve capacity during pandemic. Results from March 2020 onwards should be interpreted with caution.

Note: Starting with the reporting of December 2023 data, the methodology used to calculate DI Wait List volumes has been updated to support better accuracy of this metric.

	Current Reporting Month Site-Specific Data Quality Notes - October 2025						
Data Month	Site Name	Site No.		Data Quality Notes
